Ramanujan Summation of Divergent Series

The aim of this monograph is to give a detailed exposition of the summation method that Ramanujan uses in Chapter VI of his second Notebook. This method, presented by Ramanujan as an application of the Euler-MacLaurin formula, is here extended using a difference equation in a space of analytic functions (ISBN 978-3-319-63629-0)

Paper 8,498

This up-to-date introduction to Griffiths' theory of period maps and period domains focusses on algebraic, group-theoretic and differential geometric aspects.

A completely revised and up-to-date new edition, covering all major new developments in the field. Accessible to graduate students with modest backgrounds in algebraic topology and algebra. Begins by providing a comprehensive introduction to the basic theory as developed by Griffiths

Geometric Invariant Theory

Over the Real and Complex Numbers

=Universitext

190 pp.

11,170

Geometric Invariant Theory (GIT) is developed in this text within the context of algebraic geometry over the real and complex numbers. This sophisticated topic is elegantly presented with enough background theory included to make the text accessible to advanced graduate students in mathematics and physics with diverse backgrounds in algebraic and differential geometry (ISBN 978-3-319-65905-3)

Two central problems in computer science are P vs NP and the complexity of matrix multiplication. The first is also a leading candidate for the greatest unsolved problem in mathematics. The second is of enormous practical and theoretical importance. Algebraic geometry and representation theory provide fertile ground for advancing work on these problems and others in complexity (ISBN 978-1-107-19923-1)

 This book exploits the classification of a class of linear bounded operators with rank-one self-commutators in terms of their spectral parameter, known as the principal function. The resulting dictionary between two dimensional planar shapes with a degree of shade and Hilbert space operators turns out to be illuminating and beneficial for both sides

Shadowing and Hyperbolicity
 =Lecture Notes in Mathematics, Vol. 2193
 216 pp. 8,810
 Focusing on the theory of shadowing of approximate trajectories (pseudotrajectories) of dynamical systems, this book surveys recent progress in establishing relations between shadowing and such basic notions from the classical theory of structural stability as hyperbolicity and transversality

Modern Real Analysis
2nd edition
=G.T.M. Vol. 278

398 pp. 13,130

This first year graduate text is a comprehensive resource in real analysis based on a modern treatment of measure and integration. Presented in a definitive and self-contained manner, it features a natural progression of concepts from simple to difficult.

This second edition contains many substantial improvements, including the addition of problems for practicing techniques, and an entirely new section devoted to the relationship between Lebesgue and improper integrals

**日本数学会 秋季総合分科会
書籍展示のお知らせ**

日時： 9月11日(月) ~ 9月14日(木)
場所： 山形大学 小白川キャンパス
理学部3号館 2階 A202

恒例により書籍の展示を致します。
皆様のご来場を心よりお待ちしております。
